

Company Overview

Founded in 2004, Jatheon Technologies has designed the world's first non-intrusive network appliance, simplifying archiving, indexing, retrieval and dynamic monitoring of corporate email and messaging data.

Jatheon has designed and developed Plug n Comply™, a family of appliance based email and message archiving solutions for companies seeking full regulatory compliance, internal policy management, storage space management, and eDiscovery functionality. Jatheon offers an all-in-one comprehensive, cost effective, and easy to deploy archiving appliance. It requires minimal IT support, offering simple management of corporate messaging data and related policy implementation.

Advanced Features

The Plug n Comply™ Family of appliances are designed to capture all incoming, outgoing, and internal messages, check all captured messages against user defined rules, flag and notify any violations, as well as index and store messages for future search and retrieval.

Jatheon's appliances offer comprehensive search functions either through a secure web based interface or by an integrated Microsoft Outlook Plug-in. Companies can also monitor messages for company policy violations or SEC compliance. Users have access to all of their personal data and compliance officers can package information as PST files or export the messages in a Portable Document File – PDF format.

All Jatheon appliances include advanced message reporting, exporting to PDF or PST file formats, the ability to save common searches, audit trail for all activities, LDAP and Active Directory integration, and secure access via a web browser or Outlook Plug-in.

The appliance will work across many network platforms and email systems with interfaces available for platforms such as MS Exchange, GroupWise, Lotus Notes and others. In addition to interfacing with messaging platforms, Jatheon has developed an innovative "packet sniffing" stealth acquisition technology that will allow the appliance to capture messages directly from the network even when customers outsource their mail services. The appliance itself is non-intrusive to the network. Jatheon's solution includes real time remote monitoring services that deliver extensive system status and performance data directly to Jatheon technical support.

Jatheon Solution

Offers a comprehensive compliance solution

- Full Indexing & Archiving
- Search & Retrieval
- Legal Hold
- Retention Policy Management

Automates identification of suspect content

- Simple Policy Implementation
- Natural Language Processing

Offers a comprehensive audit trail and evidence of review logging and reporting capabilities

Integrates email archive with Write Once Read Many (WORM) storage devices

Storage Space Management

- Offload electronic message data from active servers into manageable secure archival storage – safely preserved and searchable for years. Consistently provides a high compression ratio.

eDiscovery

- Ability to rapidly search and retrieve messages
- Restore messages to inbox or export directly to PST, PDF or printer

Remote System Monitoring
